[illegible][illegible][illegible]

```

// Focus on "what changed"
// Directly communicating errors and user feedback to specific team members makes
// the most common version questions: "What you changed last time?"

// Detailed suggestions
// Grouping technical errors, performance degradation, and user feedback into a
// single set of data makes them easier to manage, suggest, and present.

// Simplicity over deep tracing
// Rather than complex distributed tracing, webflow provides immediate, high-level
// clarity needed to solve a task. "Webflow is 100% backend."

```
